

Lubrilon Emissions Pass Testimonials

Good morning from Bethesda, either Paul is overly cocky or your little 50ml bottles of Keep Clean are more than capable of kicking butt in the emissions area. To tell the truth I believe it's a little of both. Here is what transpired yesterday. Paul's brother owns a full service station just around the corner from where Paul's garage is. His brothers had a customer's van in for emission testing and it was failing miserably. He called Paul and told him about it and Paul told him to bring it over and not to do anything what-so-ever with the motor.

When the van arrived Paul hooked up his tester to the tail pipe and ran an emissions test. Sure enough, the 1986 Chevy Van with a 5.0 Liter V-8 was failing miserably. Paul never opened the hood, but walked over and poured one 50 ml bottle of Keep Clean Gas Enhancer in the tank and allowed the van to run at idle for about 10 minutes at which time he re-ran the emission test and the vehicle passed with far better than normal numbers.

Here are the numbers:	Before	Maryland State Standard	After Keep Clean (10 Min)
Hydrocarbons	3.80	2.2	.80
CO2	1.85	1.20	.47

Now..... how about them apples! It's performance like this that is getting the Lubrilon name flying around the Washington DC area.

* The above is an excerpt from a consumer testimonial

**NOTE: Lubrilon formula sold under different private label name at time of testimonials.
